1. Executive Summary

Mersimoy International Hotel has established itself as a respected hospitality provider committed to delivering quality accommodation and customer service. As the hospitality industry continues to embrace digital transformation, maintaining a strong online presence and efficient management systems has become essential for attracting guests, improving operations, and remaining competitive.

NextGen Ethiopia is pleased to present this Digital Transformation Proposal, designed to modernize the hotel's digital presence and enhance the guest experience. The proposed solution includes the development of a professional, responsive website integrated with an online room reservation system, an administrative dashboard for managing rooms and bookings, a photo gallery, contact and inquiry features, Google Maps integration, and a secure content management system.

The solution is intended to simplify hotel operations by reducing manual processes, improving reservation management, increasing online visibility, and providing guests with convenient access to hotel information and booking services at any time. The platform will be optimized for desktop and mobile devices, ensuring accessibility for both local and international visitors.

The project will be developed using modern, secure, and scalable technologies, allowing the hotel to expand its digital services in the future, including online payment integration, customer loyalty programs, promotional campaigns, and additional hospitality features.

NextGen Ethiopia is committed to delivering a reliable, high-quality solution that aligns with Mersimoy International Hotel's business objectives. We will provide professional implementation, deployment, training, and post-launch technical support to ensure a smooth transition and long-term success.

We appreciate the opportunity to present this proposal and look forward to partnering with Mersimoy International Hotel to strengthen its digital presence and support its continued growth.

2. About NextGen Ethiopia

Company Profile

NextGen Ethiopia is an Ethiopian technology company dedicated to developing innovative digital solutions that help businesses, educational institutions, and organizations improve their operations through modern technology. Our mission is to empower organizations with reliable, secure, and user-friendly software that enhances efficiency, customer satisfaction, and long-term growth.

Our Vision

To become one of Ethiopia's leading technology companies by delivering innovative digital solutions that contribute to the country's digital transformation and economic development.

Our Mission

Develop high-quality software solutions tailored to client needs.

Deliver reliable, secure, and scalable digital products.

Promote digital transformation across Ethiopian businesses and institutions.

Build long-term partnerships through professionalism, innovation, and excellent customer support.

Our Services

NextGen Ethiopia provides a range of technology services, including:

- Professional website design and development
- Custom web and mobile application development
- Hotel management and online booking systems
- Business management systems
- Educational technology platforms
- UI/UX design
- System maintenance and technical support
- Digital consulting and technology solutions

Why NextGen Ethiopia?

We understand that every business has unique requirements. Our approach focuses on carefully analyzing client needs, designing practical solutions, and delivering systems that are modern, secure, scalable, and easy to use. We are committed to maintaining high standards of quality throughout planning, development, testing, deployment, and ongoing support.

For the Mersimoy International Hotel project, our objective is not only to build a professional digital platform but also to create a solution that strengthens the hotel's brand, improves

operational efficiency, enhances the guest experience, and supports future business growth.

3. Current Challenges

The hospitality industry is increasingly dependent on digital technologies to attract guests, streamline operations, and deliver exceptional customer experiences. To remain competitive and meet the expectations of modern travelers, hotels require efficient digital platforms that provide convenient access to information and services.

Based on our assessment, Mersimoy International Hotel can further strengthen its digital presence and operational efficiency in the following areas:

- **Limited Online Visibility** — Potential guests increasingly search for hotels online before making reservations. A modern and optimized digital presence helps attract both local and international visitors.
- **Manual Reservation Management** — Managing bookings through phone calls, messaging applications, or manual records can increase administrative workload and the possibility of scheduling conflicts.
- **Limited Access to Real-Time Information** — Guests benefit from having immediate access to room availability, pricing, facilities, hotel policies, and contact information through a centralized online platform.
- **Customer Communication** — Providing a dedicated platform for inquiries, reservation requests, and customer support can improve response times and enhance guest satisfaction.
- **Brand Presentation** — A professionally designed website allows the hotel to effectively showcase its rooms, facilities, services, dining options, conference halls, and promotional offers, strengthening its brand image.
- **Administrative Efficiency** — Managing website content, reservations, room information, and customer inquiries through a centralized administration system reduces manual effort and improves operational efficiency.
- **Future Digital Expansion** — A scalable digital platform provides a foundation for future enhancements such as secure online payments, customer loyalty programs, promotional campaigns, multilingual support, and integration with third-party booking services.

By addressing these areas, Mersimoy International Hotel can enhance its digital presence, improve operational efficiency, strengthen customer engagement, and position itself for sustainable growth in an increasingly competitive hospitality market.

4. Proposed Solution

NextGen Ethiopia proposes the design, development, deployment, and maintenance of a comprehensive digital platform for Mersimoy International Hotel. The solution is designed to enhance the hotel's online presence, improve operational efficiency, simplify reservation management, and provide guests with a seamless digital experience.

The proposed system will consist of the following components:

Professional Hotel Website

A modern, responsive, and visually appealing website that reflects the hotel's brand identity and provides visitors with complete information about its services and facilities.

Online Room Reservation System

Guests will be able to browse available room types, view room details, pricing, and amenities, submit reservation requests online, and receive booking confirmation from hotel staff.

Administrative Dashboard

A secure administration panel will enable authorized staff to manage room information, reservations, prices, news and promotions, upload images, monitor customer inquiries, and manage website content.

Room & Facility Showcase

The website will professionally present rooms and suites, restaurant and dining services, conference and meeting halls, recreational facilities, hotel amenities, and special offers and promotions.

Photo Gallery

A high-quality image gallery will showcase the hotel's facilities, creating a strong first impression and helping potential guests make informed booking decisions.

Contact & Inquiry System

Visitors will be able to send inquiries, request additional information, contact the hotel directly, and view location details and business hours.

Interactive Map Integration

Google Maps integration will allow guests to easily locate the hotel and obtain directions.

Mobile-Friendly Design

The entire platform will be fully responsive, ensuring an excellent user experience on smartphones, tablets, laptops, and desktop computers.

Security & Performance

The platform will incorporate modern security practices, including secure administrator authentication, protected data management, regular backups, and performance optimization for reliability and stability.

Scalable Architecture

The system will be designed for future expansion, allowing additional features to be integrated with minimal disruption.

The proposed solution is intended to provide Mersimoy International Hotel with a secure, modern, and scalable digital platform that strengthens its brand, improves operational efficiency, enhances customer satisfaction, and supports long-term business growth.

5. Project Objectives

The primary objective of this project is to design and implement a modern, secure, and scalable digital platform that enhances the operational efficiency, customer experience, and market presence of Mersimoy International Hotel.

The project aims to achieve the following objectives:

- **Strengthen Digital Presence** — Develop a professional website that accurately represents the hotel's brand, services, and facilities while increasing its visibility to local and international guests.
- **Simplify the Reservation Process** — Provide an online reservation system that enables guests to submit booking requests conveniently and allows hotel staff to manage reservations more efficiently.
- **Improve Guest Experience** — Offer visitors quick access to room information, facilities, pricing, contact details, hotel policies, and other essential information through an intuitive and user-friendly interface.
- **Increase Operational Efficiency** — Reduce manual administrative tasks by providing a centralized system for managing rooms, reservations, website content, promotional offers, and customer inquiries.
- **Enhance Marketing and Brand Image** — Create a modern digital platform that showcases the hotel's accommodation, dining services, conference facilities, and promotional campaigns to attract more guests.
- **Support Data Accuracy and Security** — Implement secure user authentication and reliable data management practices to protect business information and ensure system stability.
- **Provide a Scalable Solution** — Develop a platform that can easily accommodate future enhancements such as online payments, multilingual support, customer loyalty programs, analytics, and integration with external booking platforms.
- **Ensure Long-Term Sustainability** — Deliver a maintainable and well-documented solution, accompanied by technical support and staff training, to ensure the platform continues to meet the hotel's operational needs over time.

By accomplishing these objectives, the project will provide Mersimoy International Hotel with a reliable digital foundation that improves service delivery, strengthens customer engagement, and supports continued business growth in the evolving hospitality industry.

6. Project Scope

This proposal covers the planning, design, development, testing, deployment, and initial technical support of a comprehensive digital platform for Mersimoy International Hotel.

The project includes the development of a professional hotel website, reservation management system, guest registration system, room management system, reporting system, and administration dashboard to improve hotel operations, customer experience, and business efficiency.

A. Project Deliverables

1. Professional Hotel Website

NextGen Ethiopia will develop a modern, responsive, and user-friendly website that represents Mersimoy International Hotel's brand, services, and facilities.

The website will include:

- Home page
- About Us page
- Rooms and Suites page
- Facilities and Services page
- Restaurant and Dining page
- Conference and Event Hall page
- Gallery page
- Contact Us page
- Career page (optional)
- Privacy Policy and Terms pages

The website will be optimized for mobile devices, tablets, desktop computers, and search engine visibility (SEO fundamentals).

2. Online Reservation System

The system will provide an efficient reservation process for guests and hotel management.

Features include:

- Online room reservation requests
- Room category display
- Room details and amenities
- Pricing information
- Room availability checking
- Reservation approval and management
- Booking confirmation management

- Guest booking records

Guest Registration & Check-in Management

The system will include a digital guest registration module to improve guest management and check-in procedures.

Features include:

- Digital guest registration form
- Guest personal information management
- National ID/passport information recording
- Guest profile creation
- Previous stay history tracking
- Check-in and check-out records
- Guest search functionality
- Export guest information reports as PDF
- Secure storage of guest registration records

3. Room Management System

The system will provide complete room status management.

Hotel staff will be able to:

- Add and manage rooms
- Assign room categories
- Update room information
- Set room prices
- View room availability
- Change room status according to operational conditions

Room status options will include: Available, Occupied, Unavailable, Under Maintenance
This allows hotel management to monitor room conditions and improve daily operations.

4. Administration Dashboard

A secure administration dashboard will allow authorized hotel staff to manage all major hotel operations.

The dashboard will include:

Room Management

- Add, edit, and remove rooms
- Manage room categories
- Update prices
- Change room status
- Monitor room availability

Reservation Management

- View reservation requests
- Approve or reject bookings
- Manage booking status
- Track guest reservations

Guest Management

- View registered guests
- Manage guest profiles
- Review guest history
- Manage check-in and check-out records
- Export guest data reports as PDF

Financial & Revenue Reporting

The system will provide reporting features including revenue reports, booking reports, occupancy reports, guest statistics, reservation summaries, and exportable reports in PDF format.

5. Content Management System

The platform will allow authorized hotel representatives to manage digital content, including:

- Hotel profile
- Room information
- Facilities and services
- Photo gallery
- Promotions and offers
- Announcements
- Contact information

6. User Experience and Additional Features

The solution will provide responsive design, professional user interface, easy navigation, fast loading performance, Google Maps integration, contact and inquiry system, and mobile-friendly experience.

7. Security and Data Protection

The system will include security measures to protect hotel and guest information.

Security features:

- Secure administrator authentication
- Role-based access control
- Protected database management
- Secure storage of sensitive guest information
- Backup configuration
- Controlled access to National ID/passport records

8. Testing and Deployment

Before final delivery, NextGen Ethiopia will perform system testing, user interface testing, performance testing, security testing, bug fixing, production deployment, and final system handover.

9. Staff Training (Separate Service)

Staff training is not included in the main project package.

If requested, NextGen Ethiopia will provide professional training for hotel staff as a separate service with an additional cost.

Training may include administration dashboard usage, room management, reservation processing, guest registration procedures, report generation, website content updates, and system management.

The training schedule and cost will be agreed upon separately between both parties.

B. Items Outside the Current Scope

The following services are not included in the current project package unless added through a separate agreement:

- Staff training
- Online payment gateway integration
- Mobile application development
- Integration with third-party booking platforms
- Accounting or ERP system development
- Advanced analytics systems
- Digital marketing campaigns
- Professional photography and video production
- Additional features requested after project approval

Scope Management

Any changes to the approved project requirements, features, timeline, or deliverables will be documented and reviewed by both parties before implementation. This approach ensures transparency, proper project management, and successful delivery of the digital transformation solution for Mersimoy International Hotel.

7. Technology Stack

NextGen Ethiopia will utilize reliable and modern web technologies to develop a secure, scalable, and efficient digital platform for Mersimoy International Hotel.

The selected technology stack combines traditional web technologies, custom backend development, and cloud-based services to provide a flexible solution that meets the hotel's operational requirements.

1. Frontend Development

The user-facing website and system interfaces will be developed using modern web technologies to provide a professional and responsive experience.

Technologies:

- HTML5 — Structure and content organization
- CSS3 — Styling, responsive layouts, and visual design
- JavaScript — Interactive features and dynamic user experience

Frontend capabilities include responsive design for mobile, tablet, and desktop devices, modern user interface, fast page performance, easy navigation, and professional presentation of hotel services and facilities.

2. Backend Development

The system backend will be developed using a combination of custom backend solutions and cloud-based backend services.

Custom Backend Development

Custom backend components will handle business logic, reservation management, room status management, guest registration, check-in and check-out processing, revenue calculations, report generation, and administrative operations.

The custom backend will provide flexibility and allow the system to be customized according to Mersimoy International Hotel's specific requirements.

Firebase Backend Services

Firebase services may be used for supporting specific system requirements, including authentication and secure user login, cloud database services, file and image storage, real-time data synchronization, and cloud-based application support.

The combination of custom backend development and Firebase services provides a balance between flexibility, reliability, and scalability.

3. Database Management

The system will use secure database solutions to manage hotel operational data, including room information, room availability status, guest registration records, National ID/passport information, reservation records, revenue data, user accounts, and system reports.

Database management will include secure data storage, efficient data retrieval, backup capabilities, and controlled access permissions.

4. Authentication and Security

The platform will include security mechanisms to protect hotel and guest information.

Security features:

- Secure administrator authentication
- User access control
- Protected database operations
- Secure handling of guest personal information
- Restricted access to sensitive National ID/passport data

5. File and Media Management

The system will support management of digital assets, including hotel images, room photos, promotional materials, guest-related documents where required, and generated PDF reports.

6. Reporting and Document Generation

The reporting system will provide hotel management with useful operational insights.

Reports include revenue reports, reservation reports, occupancy reports, guest information reports, and check-in/check-out reports. The system will support exporting reports into professional PDF documents.

7. Hosting and Deployment

The platform will be deployed using suitable hosting infrastructure to provide reliable availability, secure operation, performance optimization, and scalability for future growth.

8. Future Expansion Capability

The architecture will allow future improvements, including online payment integration, mobile application development, multi-language support, customer loyalty systems, third-party booking platform integration, and advanced analytics and reporting.

By combining custom web development with cloud technologies, NextGen Ethiopia will deliver

Mersimoy International Hotel a flexible, maintainable, and scalable digital platform designed for long-term operational success.

8. Project Timeline

The estimated project duration for the Mersimoy International Hotel Digital Transformation Project is between **1.5 months and 2.5 months**, depending on the final approved requirements, feedback process, availability of required materials, and project complexity.

The project will be completed through the following phases:

Phase	Activities	Estimated Duration
Phase 1: Requirement Analysis & Planning	Collect hotel requirements, understand operational processes, define system features, and create project charter.	3-5 Days
Phase 2: UI/UX Design & System Architecture	Design website interfaces, dashboard layouts, database structure, and system workflows.	5-7 Days
Phase 3: Frontend Development	Develop the hotel website, responsive pages, room showcase, gallery, and contact features.	10-15 Days
Phase 4: Backend & System Development	Develop reservation system, guest registration, room management, and reporting system.	15-25 Days
Phase 5: Reporting & Advanced Features	Implement revenue reports, guest information reports, PDF export, and status management.	5-10 Days
Phase 6: Testing & Optimization	Perform system testing, security checks, bug fixing, and performance improvements.	5-7 Days
Phase 7: Deployment & Final Delivery	Deploy the system, configure hosting, final review, and project handover.	3-5 Days

Estimated Total Duration

Minimum Duration: Approximately 1.5 months

Maximum Duration: Approximately 2.5 months

The exact completion date will be determined after final requirement approval and project initiation.

Project Milestones

Milestone 1: Project Approval

- Proposal approval
- Agreement signing
- Requirement confirmation
- Project start

Milestone 2: Design Completion

- Website and dashboard design approval
- Database and system structure confirmation

Milestone 3: Development Completion

- Hotel website
- Reservation system
- Guest registration system

- Room management system
- Administration dashboard
- Reporting features

Milestone 4: Testing and Review

- System testing
- Client review
- Final adjustments

Milestone 5: Deployment and Handover

- System deployment
- Final delivery
- Documentation handover
- Optional staff training (separate service)

NextGen Ethiopia will maintain continuous communication with Mersimoy International Hotel throughout the development process to ensure the project is delivered according to the approved requirements and timeline.

9. Cost Proposal

Project Investment

The estimated investment for the Mersimoy International Hotel Digital Transformation Project is between:

80,000 ETB – 100,000 ETB

The final project cost will be determined based on the final approved requirements, selected features, and agreement between Mersimoy International Hotel and NextGen Ethiopia.

This investment covers the complete development and delivery of the proposed digital platform, including design, development, testing, deployment, and initial system setup.

Included in the Project Package

Website Development

- Professional hotel website
- Responsive design for mobile, tablet, and desktop
- Hotel information pages
- Room and facility showcase
- Gallery system
- Contact and inquiry features

Hotel Management System

- Online reservation system
- Guest registration system
- National ID/passport information recording
- Check-in and check-out management
- Room management system
- Room status control: Available, Occupied, Unavailable, Under Maintenance

Administration Dashboard

- Room management
- Reservation management
- Guest management
- Content management
- Revenue reports
- Guest information reports
- PDF report export functionality

Technical Services

- Database setup and configuration
- System testing
- Deployment

- Initial production setup
- Final project handover

Domain and Hosting

NextGen Ethiopia will provide and configure the required domain and hosting services for the first year after project completion.

The first-year setup includes:

- Domain configuration
- Hosting configuration
- Website deployment
- Initial server setup

After the first year, the renewal costs for domain, hosting, and related third-party services will be the responsibility of Mersimoy International Hotel.

Payment Structure

The project payment will be divided into milestones:

1. Project Initiation Payment

40% of total project cost

Paid after proposal approval, agreement signing, and project commencement.

2. Development Progress Payment

40% of total project cost

Paid after completion of major development milestones, including website development, database integration, reservation system, guest management system, and administration dashboard.

3. Final Delivery Payment

20% of total project cost

Paid after final testing, successful deployment, and project handover.

Additional Services (Separate Cost)

The following services are not included in the main project package and will be charged separately if requested:

- Staff training
- Additional feature development
- Mobile application development
- Online payment gateway integration
- Digital marketing services
- Professional photography and content creation
- Long-term maintenance contracts

Staff Training

Staff training is a separate service and is not included in the project package price.

If requested, NextGen Ethiopia will provide professional training for hotel employees on using the administration dashboard, managing reservations, registering guests, managing room status, generating reports, and updating website content.

Training cost and schedule will be discussed and agreed upon separately.

Third-Party Services

Any third-party services required after the first year, including domain renewal, hosting renewal, or external service subscriptions, will be paid directly by Mersimoy International Hotel.

Pricing Validity

This proposal and pricing structure remain valid for the agreed period after submission. Any changes to the approved project scope may affect the final cost and delivery timeline.

NextGen Ethiopia is committed to delivering a reliable, scalable, and professional digital solution that provides long-term value for Mersimoy International Hotel.

10. Support & Maintenance

NextGen Ethiopia is committed to ensuring the stability, reliability, and continuous improvement of the Mersimoy International Hotel digital platform after deployment.

1. Three-Month Post-Deployment Support

Following the successful deployment and final handover of the system, NextGen Ethiopia will provide **three (3) months** of post-deployment technical support.

During this period, we will:

- Fix software bugs and technical errors related to the delivered system
- Resolve issues identified during normal system operation
- Improve system stability and performance where necessary
- Implement minor updates and adjustments that are mutually agreed upon by both parties
- Provide technical assistance related to the delivered features

This support is provided at no additional cost, provided that the requested changes are within the agreed project scope.

2. Ongoing Maintenance

After the three-month support period expires, maintenance and technical support services can continue under a separate maintenance agreement.

These services may include security updates, performance optimization, database maintenance, feature enhancements, system improvements, technical support, and compatibility updates.

3. Technical Support

NextGen Ethiopia will provide technical assistance for website operation, reservation system, guest registration system, room management, administration dashboard, reporting system, and database-related issues.

4. Backup and Data Management

The system will be designed with reliable data management practices, including database backup recommendations, protection of hotel operational data, secure management of guest information, and recovery support in the event of technical issues.

5. Domain and Hosting Support

NextGen Ethiopia will provide and manage the project's domain and hosting services for the first year.

After the first year, domain renewal, hosting renewal, and any third-party service subscriptions will become the responsibility of Mersimoy International Hotel.

6. Staff Training (Separate Service)

Staff training is not included in the project package. If requested, NextGen Ethiopia will provide professional training for hotel staff at an additional cost. The training schedule, duration, and fees will be agreed upon separately.

7. Future Development

Additional features or system enhancements requested after project completion can be developed under a separate agreement based on the hotel's future operational needs.

NextGen Ethiopia is committed to building a long-term partnership with Mersimoy International Hotel by delivering reliable technical support, continuous improvement, and scalable digital solutions.

11. Benefits to Mersimoy International Hotel

The proposed Digital Transformation Project will provide Mersimoy International Hotel with a modern, secure, and scalable digital platform that enhances operational efficiency, improves customer experience, and supports long-term business growth.

Enhanced Online Presence

A professional website will strengthen the hotel's brand identity and increase its visibility to local and international guests, making it easier for potential customers to discover the hotel's services and facilities.

Increased Booking Opportunities

The online reservation system will allow guests to submit booking requests at any time, reducing reliance on manual reservation methods and increasing booking convenience.

Improved Operational Efficiency

The administration dashboard will centralize hotel operations, enabling staff to efficiently manage rooms, reservations, guest records, website content, and reports. This reduces manual work, improves accuracy, and saves valuable time.

Better Guest Management

The guest registration system enables secure management of guest information, including National ID/passport records, reservation history, and check-in/check-out records, allowing staff to provide faster and more personalized service.

Effective Room Management

The room management module provides real-time visibility of room status, allowing hotel staff to monitor whether rooms are available, occupied, unavailable, or under maintenance. This helps maximize room utilization and improve operational planning.

Better Business Insights

The reporting system provides valuable information to management through revenue reports, occupancy reports, reservation reports, guest statistics, and PDF-exportable reports. These reports support informed business decisions and performance monitoring.

Improved Customer Experience

Guests will benefit from easy access to hotel information, professional room presentations, convenient reservation requests, faster communication, and mobile-friendly browsing. This contributes to higher customer satisfaction and stronger guest confidence.

Secure Information Management

The platform incorporates security measures to protect business and guest information, ensuring that sensitive data is accessible only to authorized personnel.

Scalable Digital Platform

The system is designed for future expansion, allowing Mersimoy International Hotel to integrate additional features such as online payments, mobile applications, multilingual support, loyalty programs, and third-party booking platform integration as business needs evolve.

Long-Term Business Value

By investing in this digital platform, Mersimoy International Hotel will improve operational efficiency, strengthen its market presence, enhance guest satisfaction, and establish a reliable technological foundation that supports sustainable growth and long-term success.

NextGen Ethiopia is committed to delivering a solution that not only meets the hotel's current operational needs but also supports its future vision for innovation and excellence in the hospitality industry.

12. Terms & Conditions

1. Project Approval

The project will officially commence after approval of this proposal, signing of the project agreement by both parties, and receipt of the initial project payment.

2. Scope of Work

NextGen Ethiopia will deliver the project according to the agreed scope described in this proposal. Any additional features, modifications, or requirements requested after project approval that are outside the agreed scope may require a separate quotation, additional cost, and an extension of the project timeline.

3. Client Responsibilities

Mersimoy International Hotel agrees to provide accurate project requirements, supply logos, images, room information, pricing, and other required content, review submitted work and provide feedback within a reasonable timeframe, assign a representative to communicate with NextGen Ethiopia throughout the project, and make payments according to the agreed payment schedule. Delays in providing required information or approvals may affect the project timeline.

4. Payment Terms

The project payment shall be made according to the agreed milestone schedule: 40% upon project approval and agreement signing, 40% upon completion of the major development phase, and 20% upon final delivery and system deployment. Failure to make payments according to the agreed schedule may result in suspension of project activities until payment is received.

5. Project Timeline

The estimated completion period is between 1.5 and 2.5 months. The timeline may change due to additional feature requests, delayed client feedback or approvals, changes in project requirements, or unforeseen technical challenges. Any significant timeline adjustments will be communicated and agreed upon by both parties.

6. Intellectual Property

Upon full payment of the agreed project cost, Mersimoy International Hotel will own the completed website, hotel management system, and project content developed specifically for this project. NextGen Ethiopia retains ownership of its proprietary development tools, reusable software components, frameworks, templates, libraries, and methodologies used during development.

7. Confidentiality

NextGen Ethiopia will treat all business information, guest information, and confidential materials provided by Mersimoy International Hotel as confidential and will not disclose them to third parties without written permission, unless required by law.

8. Support and Warranty

NextGen Ethiopia will provide three (3) months of post-deployment technical support. During this period, software bugs related to the delivered system will be corrected and minor updates agreed upon by both parties will be implemented without additional charges. Requests for new features

or major system changes beyond the approved scope are not covered by this support period and may require a separate agreement.

9. Domain and Hosting

NextGen Ethiopia will provide and manage the domain name and hosting services for the first year. Beginning in the second year, all renewal fees for domain registration, web hosting, and third-party service subscriptions will be the responsibility of Mersimoy International Hotel.

10. Termination

Either party may terminate the project through written notice if the other party materially breaches the agreement and fails to remedy the breach within a reasonable period. Any completed work and payments made before termination will be handled according to the signed agreement.

11. Acceptance

This proposal becomes effective after it has been reviewed, accepted, and signed by authorized representatives of both NextGen Ethiopia and Mersimoy International Hotel. Both parties agree to work together in good faith to ensure the successful completion of the project and establish a long-term professional partnership.

13. Conclusion

NextGen Ethiopia appreciates the opportunity to present this proposal to Mersimoy International Hotel. We believe that this Digital Transformation Project will provide the hotel with a modern, secure, and scalable platform that enhances operational efficiency, improves guest experiences, and strengthens the hotel's competitive position in the hospitality industry.

The proposed solution is designed to simplify hotel management by integrating a professional website, online reservation system, guest registration, room management, reporting tools, and a secure administration dashboard into a single, efficient platform. Beyond meeting current operational needs, the system is built with future growth in mind, allowing for the integration of additional features and technologies as the hotel's requirements evolve.

At NextGen Ethiopia, we are committed to delivering high-quality software solutions through professionalism, technical expertise, and close collaboration with our clients. Our goal is not only to deliver a successful project but also to establish a long-term partnership based on trust, innovation, and continuous support.

We are confident that this solution will contribute to improving the hotel's operational performance, strengthening its digital presence, and delivering greater value to both management and guests.

Thank you for considering this proposal. We look forward to the opportunity to work with Mersimoy International Hotel and contribute to its continued growth and success.
